AUDIENCE 40 METERS MINIMUM IS ADVISED				

### Display Set Up.

The table above shows the firework site layout and firing times. The rows should be approximately 1 - 2 meters apart to allow you to move between the fireworks. The left and right columns should be approx 15 - 25 meters either side of the centre row (space permitting). If you don't have enough depth in your display site for each row lay down half then start from the front again.

Please read our full safety information on how to secure your fireworks safely.
